

EXHIBIT M

Exhibit 966-7

Invalidity Claim Chart for U.S. Patent No. 10,469,966 (“the ’966 patent”)

Bose Lifestyle 50 System (“Bose Lifestyle”): Bose Lifestyle was publicly available at least as of October 17, 2001.

Bose Lifestyle anticipates at least claims 1, 2, 4, 6, 8, 9, 10, 12, 14, 16 of the ’966 patent under 35 U.S.C. § 102, and renders obvious claims 1, 2, 4, 6, 8, 9, 10, 12, 14, 16 of the ’966 patent under 35 U.S.C. § 103, alone based on the state of the art and/or in combination with one or more of the secondary references noted in the below chart, or one or more of the references noted in Riders A-H. To the extent it is argued this reference does not disclose any element, that element would be obvious based on the state of the art and/or in combination with one or more of the references noted in Riders A-H.

Bose Lifestyle was described in a printed publication, or in public use, on sale, sold, known in this country, or otherwise available to the public before the priority date of the ’966 patent. Features of the of the Bose Lifestyle would have been apparent to a person of ordinary skill in the art, rendering the reference and all publications describing them § 102(a), (b), and (g) prior art.

At least the following documents describe the functionality of the Bose Lifestyle:

1. [1] Bose Lifestyle 50 System, Owner’s Guide, October 17, 2001

5. [5] BOSE_SUB-0000162-2610

Google expects to supplement this chart upon production of source code and other documents produced in discovery in this litigation relating to the Bose Lifestyle.

These documents themselves are also each individually prior art under at least one of § 102(a), (b), (g) and § 103 based on their dates of publication and public availability.

To avoid duplication and cumulative excerpts, exemplary quotations and citations are provided. The citations to portions of any reference in this chart are exemplary only. Google reserves the right to use the entirety of any reference cited in this chart to show that the asserted claims are anticipated and/or obvious, or to show the state of the art at the relevant time. References to figures should be understood to also refer to any accompanying text. Additional support can be found elsewhere in the prior art reference, and Google expressly reserves the right to rely on such other support and passages at a later time. The use of claim terms in the below chart is based on Sonos' construction of claim terms in its infringement contentions as understood by Google, as well as the plain and ordinary meaning of the claim terms. This chart should not be construed as consenting to or agreeing with Sonos' construction of claim terms. Because discovery is ongoing, Google reserves all rights to amend its invalidity contentions based on new information produced in discovery.

Google expressly reserves the right to supplement its invalidity contentions, including this chart, to demonstrate that the prior art invalidates the claims of the '966 patent

Claim 1 Portion	Claim 1 Text	Bose Lifestyle
[1Pre]	1. <i>A computing device comprising: one or more processors; a non-transitory computer-readable medium; and program instructions stored on the non-transitory computer-readable medium that, when executed by the one or more processors, cause the computing device to perform functions comprising:</i>	<p>Bose Lifestyle discloses a computing device comprising: one or more processors; a non-transitory computer-readable medium; and program instructions stored on the non-transitory computer-readable medium that, when executed by the one or more processors, cause the computing device to perform functions comprising. For example:</p> <p>[1] at 4:</p> <p>Thank you for purchasing the Bose® Lifestyle® 50 system. Years of research lie behind this complete audio home entertainment system – the most advanced home theater system from Bose. Technological innovations that make the Lifestyle® 50 system unique include the Bose Personal™ music center, which places all system operations in the palm of your hand, and tiny Jewel Cube® speakers.</p> <p>The interactive Personal music center is a clear departure from convention, communicating with the system through a two-way radio data link. The result for you is full control of this entertainment system as you move about your home.</p> <p>The other elements of the Lifestyle® 50 system are designed to be hidden from view:</p> <ul style="list-style-type: none"> • The elegant Lifestyle® CD changer, designed to give you flexibility in where it is placed • The hideaway powered Acoustimass® module that delivers the rich, full, lifelike bass • The Bose multi-room interface, with four independent audio outputs that allow you to enjoy Bose sound throughout your home.

		<p>Using the Personal™ music center display</p> <p>The music center display provides information on the system functions. The display offers different combinations of buttons to provide control of the function you are using. Sometimes an item on the display will flash to provide information about a system function. When an item flashes faster, it is alerting you to a needed action.</p> <p>Using the primary buttons</p> <p>The primary buttons (ON/OFF, SLEEP, MENU, VOLUME, and MUTE) are located at the left and right sides of the display.</p> <p>Figure 21 The display showing the primary buttons, SOURCE buttons, and KEYPAD buttons</p>  <p>The diagram shows a rectangular control panel. On the left side, there are four primary buttons: ON/OFF, SLEEP, MENU, and a volume up/down button. On the right side, there are four primary buttons: a volume up/down button, MUTE, and two more volume up/down buttons. In the center, there is a display area showing 'FM', 'STEREO', and '87.9'. Above the display is a 'SOURCE' button. Below the display are 'SEEK' and 'PRESET' buttons. To the left of the display are 'FM', 'AM', 'CD', 'VIDEO 1', 'VIDEO 2', 'TAPE', and 'AUX' buttons. To the right of the display is a 'KEYPAD' button with numbers 1-0. Labels with leader lines point to various parts: 'Primary buttons' (left and right), 'SOURCE buttons' (left of display), 'Current status display' (center), 'Source display area' (top of display), and 'KEYPAD buttons' (right of display).</p> <p>[1] at 22:</p>

Claim 1 Portion	Claim 1 Text	Bose Lifestyle
		<p><i>Listening to the system</i></p> <p>Your Lifestyle® 50 system uses digital signal processing to bring even greater realism and impact to both movies and music recordings. Built-in Dolby Digital decoding delivers up to 5.1 discrete audio channels (that is, five for the independent Jewel Cube® speakers and one for rich bass from the Acoustimass® module) from DVD, digital TV, next-generation cable boxes, and satellite receivers. With analog formats, as well as for two-channel PCM and Dolby Digital bitstreams, Videostage® decoding steers front information to the left, center, and right, and directs surround information to the left and right rear channels. As a result, the sound of stereo broadcasts and rented or recorded tapes can approach that of your DVD discs.</p> <p>In addition, Videostage decoding can process a one-channel program and direct five-channel sound to five independent speakers. Dialogue remains locked on-screen, while music and ambient effects fill the room to increase your listening enjoyment.</p> <p>You may choose to listen through two, three, or five speakers. Traditional stereo may be enjoyed through two or more speakers. Listening through three or five speakers helps anchor the dialogue of movies to the picture and provides a more solid image for music vocals. For the greatest surround effect, listening through five speakers gives you the most convincing sound experience.</p> <p>[1] at 22:</p> <p><i>Adjusting center and surround levels</i></p> <p>The SPEAKERS selection display (Figure 23) also allows you to adjust the volume levels of the center and surround speakers. At the factory, these levels are set to zero. To adjust them, press the MENU button until SPEAKERS is displayed. Then use the ◀ or ▶ arrow buttons to adjust the levels.</p> <ul style="list-style-type: none"> • The CENTER level can be adjusted to soften or emphasize center speaker image. • The SURROUND level can be adjusted to move the surround information forward in the room or further to the rear. <p>The system remembers the center and surround level settings for the room in which they were adjusted.</p> <p>[1] at 36:</p>

Claim 1 Portion	Claim 1 Text	Bose Lifestyle
		<p>Fine-tuning your system</p> <p>In most situations, you only need to follow the speaker placement guidelines (see “Setting Up” on pages 6-8) for your system to provide excellent sound quality. You do not need to adjust tone settings for changes in volume, since Bose® patented integrated signal processing provides a natural tonal balance over the full range of volume settings.</p> <p>If desired, you can further fine-tune your system as described here.</p> <p>Figure 39 <i>Treble and bass controls</i></p>  <p>Adjusting speaker controls</p> <p>The Lifestyle® 50 system treble and bass controls are located on the Acoustimass® module (Figure 39). They allow you to adjust the treble (high frequencies) and bass (low frequencies). In the normal setting, the dots on each control are in the 12 o'clock position. You can also locate the normal setting by feeling when the control settles into the notch at this position. Turn the controls clockwise to increase, and counterclockwise to decrease, the amount of treble or bass.</p> <p>Compensating for room acoustics</p> <p>The acoustics (sound qualities) of your room can affect the overall sound quality of any speaker system. In general, you can reduce many problems with acoustics by the careful use of the treble and bass controls.</p> <p>Too much or too little treble</p> <p>Rooms that reflect a lot of sound, especially those with bare floors and walls, may sound overly shrill or “bright.” Turning down the treble control (toward –) decreases treble sound. Rooms with a lot of sound-absorbing furnishings, such as upholstered furniture, wall-to-wall carpet, or heavy drapes, may sound muffled or dull. Moving speakers further away from soft furnishings increases treble. You can increase treble sound by slightly turning up the treble control (toward +).</p> <p>Too much or too little bass</p> <p>You can decrease bass sound by turning down the bass control (toward –). To increase bass, turn up the bass control (toward +). Acoustimass module placement also affects the amount of bass you hear. Placing the module closer to the corner of the room increases bass. Moving the module away from the corner decreases bass.</p> <p>[1] at 40:</p>

Claim 1 Portion	Claim 1 Text	Bose Lifestyle
		<p>Connecting additional rooms</p> <p>Follow the placement guidelines for the Bose® powered speakers that you plan to connect. Then review your plan for how to connect these speakers to the multi-room interface in your primary room. If you have questions or need extension cables to complete the connections, call Bose Customer Service at the numbers listed on the back inside cover of this owner's guide.</p> <p>CAUTION: Make sure all components are unplugged from the power outlet before you begin hooking up additional speakers.</p> <p>Connect the audio input cable from your additional powered speakers to the selected ROOM jack on the back of the multi-room interface.</p> <ol style="list-style-type: none"> 1. Plug the small black multi-pin connector (flat side facing up) into the jack marked ROOM B, C, or D on the back of the interface. 2. Follow the instructions that came with your speakers for connecting the cable to the speakers. <p>Note: Be sure that each connector is inserted completely into each jack.</p> <p>Figure 47 ROOM jacks on the multi-room interface</p>  <p>[1] at 41:</p>

Claim 1 Portion	Claim 1 Text	Bose Lifestyle
		<p data-bbox="724 297 1234 329">Operating in more than one room</p> <p data-bbox="1024 342 1885 496">Your Lifestyle® 50 system can control up to four sets of Bose® powered speakers, allowing your family to enjoy different audio sources (CD, radio, TV, etc.) in up to four rooms. These rooms are referred to as room A, B, C, and D, with room A being the primary room (the one used for a one-room system). If two or more rooms are connected to your system, the Personal™ music center displays ROOM and HOUSE buttons, and room indicators (A, B, C, and/or D). Figure 48 shows an example display for a two-room system.</p> <p data-bbox="724 521 993 602">Figure 48 Example display for a two-room system</p> <p data-bbox="1024 521 1791 542">The ROOM button lets you control a single room or two or more rooms that share a source</p> <p data-bbox="1199 558 1734 579">The HOUSE button lets you control all connected rooms as one</p> <p data-bbox="1367 596 1822 633">The room indicators tell you what was selected by the ROOM or HOUSE button</p>  <p data-bbox="1024 919 1493 946">Understanding the room indicators</p> <ul data-bbox="1024 959 1902 1312" style="list-style-type: none"> <li data-bbox="1024 959 1902 1036">A A boxed letter indicates the presently-selected room or rooms. The selected room is affected by any source changes, or any change you make using the VOLUME, MUTE, ON/OFF, or SLEEP buttons. <li data-bbox="1024 1049 1902 1198">B An unboxed letter indicates a room listening to a shared source. A shared source is one that is playing in the controlled room as well as in up to three additional rooms. If you change the radio station, CD track, etc., of the shared source, the change affects all rooms sharing this source. However, you cannot change sources for all affected rooms at the same time. The VOLUME, MUTE, ON/OFF, and SLEEP buttons only affect the boxed room(s). <li data-bbox="1024 1211 1902 1312">□ An empty box appears for each connected room when you press the HOUSE button. When you change the volume in the HOUSE mode, the numerical level appearing on the display does not represent the actual volume level in all connected rooms. It only represents the actual volume in rooms represented by a boxed letter. <p data-bbox="709 1328 821 1356">[1] at 42:</p>

Using the ROOM button

The ROOM button allows you to select any connected room and control any sound source you want to hear in that room. Each time you press the ROOM button you can transfer control from one room to the next in A-B-C-D order. The room indicators on the display tell you what is currently selected. Rooms listening to a shared source can be linked and controlled as one room.

Turning on different sources in more than one room

Let's say you have a two-room system (rooms A and B) and the entire system is off. To turn on a different source in each room:

1. Wake up the Personal™ music center.
2. Press the ROOM button until the room indicator **[A]** is displayed. Press a source button, such as VIDEO 1, to turn on the system and listen to your DVD player in room A. Adjust the volume to the desired level.
3. Press the ROOM button again. The room indicator **[B]** is displayed. Press a different source button, such as CD, to listen to a CD in room B. Again, adjust the volume to the desired level.
4. Press the ROOM button again and notice that the room indicator **[A]** is displayed. You are controlling room A once again and the displays indicates that the VIDEO 1 source is on.

Setting up a shared source

Now, let's say the system is already on and you want to play the FM radio in rooms A and B:

1. Wake up the Personal music center.
2. Press the ROOM button until the room indicator **[A]** is displayed. Press the FM source button and adjust the volume to the desired level for room A.
3. Press the ROOM button again to select room **[B]**. Press the FM source button and adjust the volume to the desired level for room B. Now, the indicators **A [B]** are displayed.
4. Press the ROOM button again. The indicators **[A] [B]** appear on the display indicating that you can control these two rooms together. Any button command given now (SOURCE, VOLUME, MUTE, ON/OFF, SLEEP) is applied to both rooms.

Note: Remember that there are limits to using different sources in different rooms. With one tuner, the system cannot play one radio station in one room and another radio station in another. Similarly, with one CD changer, the system cannot play two different CDs at the same time.

Linking rooms for common control

There are two ways to link rooms in order to control them as one.

- Set up a shared source in two or more rooms and select them together using the ROOM button. See "Setting up a shared source" above.
- Link all connected rooms using the HOUSE button. See "Using the HOUSE button" on page 43.

Returning to single-room control

After you have gained control of multiple rooms using the ROOM button, you can use the ROOM button again to gain control of a single room. Press ROOM until the room you want is displayed (**[A]**, **[B]**, **[C]**, or **[D]**). Control that room as desired.

Claim 1 Portion	Claim 1 Text	Bose Lifestyle
		[1] at 43:

		<p>Using the HOUSE button</p> <p>Using the HOUSE button, you can link all rooms together and control them as one. When you press the HOUSE button, an empty box indicator is displayed for each connected room. Any button pressed after that (any source button, VOLUME, MUTE, or SLEEP) affects every room. When you are done listening you can press OFF to turn off the entire system.</p> <p>Note: <i>If you do not press any additional buttons after pressing HOUSE, pressing HOUSE again cancels HOUSE mode.</i></p> <p>Press the HOUSE button before each command to apply that command to all rooms:</p> <table><tr><th>Press ...</th><th>To do this ...</th></tr><tr><td>HOUSE then a source</td><td>Play the selected source in all connected rooms.</td></tr><tr><td>HOUSE then VOLUME ▲▼</td><td>Adjust the volume up or down by the same amount in all rooms that are on, or all connected rooms if they are all off. The system remembers the differences among the original room volume settings.</td></tr><tr><td>HOUSE then MUTE</td><td>Silence all connected rooms that are on, even if any were previously muted individually. To cancel this command, press HOUSE then MUTE again. Any rooms that were muted before this command was given stay silent until individually unmuted. If you unmute an individual room after it was muted by a HOUSE - MUTE command, the other rooms remain silent until each one is unmuted individually. Pressing HOUSE then VOLUME ▲unmutes all muted rooms.</td></tr><tr><td>HOUSE then SLEEP</td><td>Set the SLEEP timer for all rooms that are on. The SLEEP time selected applies to all rooms that are on even if they are playing different sources. If the SLEEP timer was already set in one or more rooms, the display shows the longest time already set. You can accept this time or change it for all the rooms. Claim 1 Portion	Claim 1 Text	Bose Lifestyle
		<p><i>Listening to the system</i></p> <p>Your Lifestyle® 50 system uses digital signal processing to bring even greater realism and impact to both movies and music recordings. Built-in Dolby Digital decoding delivers up to 5.1 discrete audio channels (that is, five for the independent Jewel Cube® speakers and one for rich bass from the Acoustimass® module) from DVD, digital TV, next-generation cable boxes, and satellite receivers. With analog formats, as well as for two-channel PCM and Dolby Digital bitstreams, Videostage® decoding steers front information to the left, center, and right, and directs surround information to the left and right rear channels. As a result, the sound of stereo broadcasts and rented or recorded tapes can approach that of your DVD discs.</p> <p>In addition, Videostage decoding can process a one-channel program and direct five-channel sound to five independent speakers. Dialogue remains locked on-screen, while music and ambient effects fill the room to increase your listening enjoyment.</p> <p>You may choose to listen through two, three, or five speakers. Traditional stereo may be enjoyed through two or more speakers. Listening through three or five speakers helps anchor the dialogue of movies to the picture and provides a more solid image for music vocals. For the greatest surround effect, listening through five speakers gives you the most convincing sound experience.</p> <p>[1] at 22:</p> <p><i>Adjusting center and surround levels</i></p> <p>The SPEAKERS selection display (Figure 23) also allows you to adjust the volume levels of the center and surround speakers. At the factory, these levels are set to zero. To adjust them, press the MENU button until SPEAKERS is displayed. Then use the ◀ or ▶ arrow buttons to adjust the levels.</p> <ul style="list-style-type: none"> • The CENTER level can be adjusted to soften or emphasize center speaker image. • The SURROUND level can be adjusted to move the surround information forward in the room or further to the rear. <p>The system remembers the center and surround level settings for the room in which they were adjusted.</p> <p>[1] at 36:</p>

Claim 1 Portion	Claim 1 Text	Bose Lifestyle
		<p>Fine-tuning your system</p> <p>In most situations, you only need to follow the speaker placement guidelines (see “Setting Up” on pages 6-8) for your system to provide excellent sound quality. You do not need to adjust tone settings for changes in volume, since Bose® patented integrated signal processing provides a natural tonal balance over the full range of volume settings.</p> <p>If desired, you can further fine-tune your system as described here.</p> <p>Figure 39 <i>Treble and bass controls</i></p>  <p>Adjusting speaker controls</p> <p>The Lifestyle® 50 system treble and bass controls are located on the Acoustimass® module (Figure 39). They allow you to adjust the treble (high frequencies) and bass (low frequencies). In the normal setting, the dots on each control are in the 12 o'clock position. You can also locate the normal setting by feeling when the control settles into the notch at this position. Turn the controls clockwise to increase, and counterclockwise to decrease, the amount of treble or bass.</p> <p>Compensating for room acoustics</p> <p>The acoustics (sound qualities) of your room can affect the overall sound quality of any speaker system. In general, you can reduce many problems with acoustics by the careful use of the treble and bass controls.</p> <p>Too much or too little treble</p> <p>Rooms that reflect a lot of sound, especially those with bare floors and walls, may sound overly shrill or “bright.” Turning down the treble control (toward –) decreases treble sound.</p> <p>Rooms with a lot of sound-absorbing furnishings, such as upholstered furniture, wall-to-wall carpet, or heavy drapes, may sound muffled or dull. Moving speakers further away from soft furnishings increases treble. You can increase treble sound by slightly turning up the treble control (toward +).</p> <p>Too much or too little bass</p> <p>You can decrease bass sound by turning down the bass control (toward –). To increase bass, turn up the bass control (toward +). Acoustimass module placement also affects the amount of bass you hear. Placing the module closer to the corner of the room increases bass. Moving the module away from the corner decreases bass.</p> <p>[1] at 40:</p>

		<p data-bbox="724 300 1234 332">Operating in more than one room</p> <p data-bbox="1024 342 1890 500">Your Lifestyle® 50 system can control up to four sets of Bose® powered speakers, allowing your family to enjoy different audio sources (CD, radio, TV, etc.) in up to four rooms. These rooms are referred to as room A, B, C, and D, with room A being the primary room (the one used for a one-room system). If two or more rooms are connected to your system, the Personal™ music center displays ROOM and HOUSE buttons, and room indicators (A, B, C, and/or D). Figure 48 shows an example display for a two-room system.</p> <p data-bbox="724 521 993 602">Figure 48 <i>Example display for a two-room system</i></p> <p data-bbox="1024 521 1791 542">The ROOM button lets you control a single room or two or more rooms that share a source</p> <p data-bbox="1199 558 1734 579">The HOUSE button lets you control all connected rooms as one</p> <p data-bbox="1367 596 1822 633">The room indicators tell you what was selected by the ROOM or HOUSE button</p>  <p data-bbox="1024 917 1493 950">Understanding the room indicators</p> <ul data-bbox="1024 958 1902 1312" style="list-style-type: none"> <li data-bbox="1024 958 1902 1036">A A boxed letter indicates the presently-selected room or rooms. The selected room is affected by any source changes, or any change you make using the VOLUME, MUTE, ON/OFF, or SLEEP buttons. <li data-bbox="1024 1044 1902 1198">B An unboxed letter indicates a room listening to a shared source. A shared source is one that is playing in the controlled room as well as in up to three additional rooms. If you change the radio station, CD track, etc., of the shared source, the change affects all rooms sharing this source. However, you cannot change sources for all affected rooms at the same time. The VOLUME, MUTE, ON/OFF, and SLEEP buttons only affect the boxed room(s). <li data-bbox="1024 1206 1902 1312">□ An empty box appears for each connected room when you press the HOUSE button. When you change the volume in the HOUSE mode, the numerical level appearing on the display does not represent the actual volume level in all connected rooms. It only represents the actual volume in rooms represented by a boxed letter. <p data-bbox="709 1328 821 1360">[1] at 42:</p>

Using the ROOM button

The ROOM button allows you to select any connected room and control any sound source you want to hear in that room. Each time you press the ROOM button you can transfer control from one room to the next in A-B-C-D order. The room indicators on the display tell you what is currently selected. Rooms listening to a shared source can be linked and controlled as one room.

Turning on different sources in more than one room

Let's say you have a two-room system (rooms A and B) and the entire system is off. To turn on a different source in each room:

1. Wake up the Personal™ music center.
2. Press the ROOM button until the room indicator **[A]** is displayed. Press a source button, such as VIDEO 1, to turn on the system and listen to your DVD player in room A. Adjust the volume to the desired level.
3. Press the ROOM button again. The room indicator **[B]** is displayed. Press a different source button, such as CD, to listen to a CD in room B. Again, adjust the volume to the desired level.
4. Press the ROOM button again and notice that the room indicator **[A]** is displayed. You are controlling room A once again and the displays indicates that the VIDEO 1 source is on.

Setting up a shared source

Now, let's say the system is already on and you want to play the FM radio in rooms A and B:

1. Wake up the Personal music center.
2. Press the ROOM button until the room indicator **[A]** is displayed. Press the FM source button and adjust the volume to the desired level for room A.
3. Press the ROOM button again to select room **[B]**. Press the FM source button and adjust the volume to the desired level for room B. Now, the indicators **A [B]** are displayed.
4. Press the ROOM button again. The indicators **[A] [B]** appear on the display indicating that you can control these two rooms together. Any button command given now (SOURCE, VOLUME, MUTE, ON/OFF, SLEEP) is applied to both rooms.

Note: Remember that there are limits to using different sources in different rooms. With one tuner, the system cannot play one radio station in one room and another radio station in another. Similarly, with one CD changer, the system cannot play two different CDs at the same time.

Linking rooms for common control

There are two ways to link rooms in order to control them as one.

- Set up a shared source in two or more rooms and select them together using the ROOM button. See "Setting up a shared source" above.
- Link all connected rooms using the HOUSE button. See "Using the HOUSE button" on page 43.

Returning to single-room control

After you have gained control of multiple rooms using the ROOM button, you can use the ROOM button again to gain control of a single room. Press ROOM until the room you want is displayed (**[A]**, **[B]**, **[C]**, or **[D]**). Control that room as desired.

Between these are SOURCE buttons (FM, AM, CD, VIDEO 1, VIDEO 2, TAPE, AUX) and a KEYPAD with numbers 1-0. The central area is the 'Current status display' showing 'FM', 'STEREO', and '87.9'. Above it is the 'Source display area' showing 'FM'. Below it are 'SEEK' and 'PRESET' buttons. Labels with leader lines point to 'Primary buttons' (left and right), 'SOURCE buttons', 'Current status display', 'Source display area', and 'KEYPAD buttons'.</p> <p>[1] at 22:</p>

Claim 1 Portion	Claim 1 Text	Bose Lifestyle
		<p><i>Listening to the system</i></p> <p>Your Lifestyle® 50 system uses digital signal processing to bring even greater realism and impact to both movies and music recordings. Built-in Dolby Digital decoding delivers up to 5.1 discrete audio channels (that is, five for the independent Jewel Cube® speakers and one for rich bass from the Acoustimass® module) from DVD, digital TV, next-generation cable boxes, and satellite receivers. With analog formats, as well as for two-channel PCM and Dolby Digital bitstreams, Videostage® decoding steers front information to the left, center, and right, and directs surround information to the left and right rear channels. As a result, the sound of stereo broadcasts and rented or recorded tapes can approach that of your DVD discs.</p> <p>In addition, Videostage decoding can process a one-channel program and direct five-channel sound to five independent speakers. Dialogue remains locked on-screen, while music and ambient effects fill the room to increase your listening enjoyment.</p> <p>You may choose to listen through two, three, or five speakers. Traditional stereo may be enjoyed through two or more speakers. Listening through three or five speakers helps anchor the dialogue of movies to the picture and provides a more solid image for music vocals. For the greatest surround effect, listening through five speakers gives you the most convincing sound experience.</p> <p>[1] at 22:</p> <p><i>Adjusting center and surround levels</i></p> <p>The SPEAKERS selection display (Figure 23) also allows you to adjust the volume levels of the center and surround speakers. At the factory, these levels are set to zero. To adjust them, press the MENU button until SPEAKERS is displayed. Then use the ◀ or ▶ arrow buttons to adjust the levels.</p> <ul style="list-style-type: none"> • The CENTER level can be adjusted to soften or emphasize center speaker image. • The SURROUND level can be adjusted to move the surround information forward in the room or further to the rear. <p>The system remembers the center and surround level settings for the room in which they were adjusted.</p> <p>[1] at 36:</p>

Claim 1 Portion	Claim 1 Text	Bose Lifestyle
		<p>Fine-tuning your system</p> <p>In most situations, you only need to follow the speaker placement guidelines (see “Setting Up” on pages 6-8) for your system to provide excellent sound quality. You do not need to adjust tone settings for changes in volume, since Bose® patented integrated signal processing provides a natural tonal balance over the full range of volume settings.</p> <p>If desired, you can further fine-tune your system as described here.</p> <p>Figure 39 <i>Treble and bass controls</i></p>  <p>Adjusting speaker controls</p> <p>The Lifestyle® 50 system treble and bass controls are located on the Acoustimass® module (Figure 39). They allow you to adjust the treble (high frequencies) and bass (low frequencies). In the normal setting, the dots on each control are in the 12 o'clock position. You can also locate the normal setting by feeling when the control settles into the notch at this position. Turn the controls clockwise to increase, and counterclockwise to decrease, the amount of treble or bass.</p> <p>Compensating for room acoustics</p> <p>The acoustics (sound qualities) of your room can affect the overall sound quality of any speaker system. In general, you can reduce many problems with acoustics by the careful use of the treble and bass controls.</p> <p>Too much or too little treble</p> <p>Rooms that reflect a lot of sound, especially those with bare floors and walls, may sound overly shrill or “bright.” Turning down the treble control (toward –) decreases treble sound. Rooms with a lot of sound-absorbing furnishings, such as upholstered furniture, wall-to-wall carpet, or heavy drapes, may sound muffled or dull. Moving speakers further away from soft furnishings increases treble. You can increase treble sound by slightly turning up the treble control (toward +).</p> <p>Too much or too little bass</p> <p>You can decrease bass sound by turning down the bass control (toward –). To increase bass, turn up the bass control (toward +). Acoustimass module placement also affects the amount of bass you hear. Placing the module closer to the corner of the room increases bass. Moving the module away from the corner decreases bass.</p> <p>[1] at 40:</p>

To the right are 'KEYPAD buttons' including a numeric keypad (0-9), PRESET, TUNE, and VOLUME/MUTE controls. Labels with leader lines identify the 'Primary buttons' on both sides, the 'Source display area' at the top, and the 'Current status display' at the bottom center.</p> <p>[1] at 22:</p>

Claim 1 Portion	Claim 1 Text	Bose Lifestyle
		<p><i>Listening to the system</i></p> <p>Your Lifestyle® 50 system uses digital signal processing to bring even greater realism and impact to both movies and music recordings. Built-in Dolby Digital decoding delivers up to 5.1 discrete audio channels (that is, five for the independent Jewel Cube® speakers and one for rich bass from the Acoustimass® module) from DVD, digital TV, next-generation cable boxes, and satellite receivers. With analog formats, as well as for two-channel PCM and Dolby Digital bitstreams, Videostage® decoding steers front information to the left, center, and right, and directs surround information to the left and right rear channels. As a result, the sound of stereo broadcasts and rented or recorded tapes can approach that of your DVD discs.</p> <p>In addition, Videostage decoding can process a one-channel program and direct five-channel sound to five independent speakers. Dialogue remains locked on-screen, while music and ambient effects fill the room to increase your listening enjoyment.</p> <p>You may choose to listen through two, three, or five speakers. Traditional stereo may be enjoyed through two or more speakers. Listening through three or five speakers helps anchor the dialogue of movies to the picture and provides a more solid image for music vocals. For the greatest surround effect, listening through five speakers gives you the most convincing sound experience.</p> <p>[1] at 22:</p> <p><i>Adjusting center and surround levels</i></p> <p>The SPEAKERS selection display (Figure 23) also allows you to adjust the volume levels of the center and surround speakers. At the factory, these levels are set to zero. To adjust them, press the MENU button until SPEAKERS is displayed. Then use the ◀ or ▶ arrow buttons to adjust the levels.</p> <ul style="list-style-type: none"> • The CENTER level can be adjusted to soften or emphasize center speaker image. • The SURROUND level can be adjusted to move the surround information forward in the room or further to the rear. <p>The system remembers the center and surround level settings for the room in which they were adjusted.</p> <p>[1] at 36:</p>

Claim 1 Portion	Claim 1 Text	Bose Lifestyle
		<p>Fine-tuning your system</p> <p>In most situations, you only need to follow the speaker placement guidelines (see “Setting Up” on pages 6-8) for your system to provide excellent sound quality. You do not need to adjust tone settings for changes in volume, since Bose® patented integrated signal processing provides a natural tonal balance over the full range of volume settings.</p> <p>If desired, you can further fine-tune your system as described here.</p> <p>Figure 39 <i>Treble and bass controls</i></p>  <p>Adjusting speaker controls</p> <p>The Lifestyle® 50 system treble and bass controls are located on the Acoustimass® module (Figure 39). They allow you to adjust the treble (high frequencies) and bass (low frequencies). In the normal setting, the dots on each control are in the 12 o'clock position. You can also locate the normal setting by feeling when the control settles into the notch at this position. Turn the controls clockwise to increase, and counterclockwise to decrease, the amount of treble or bass.</p> <p>Compensating for room acoustics</p> <p>The acoustics (sound qualities) of your room can affect the overall sound quality of any speaker system. In general, you can reduce many problems with acoustics by the careful use of the treble and bass controls.</p> <p>Too much or too little treble</p> <p>Rooms that reflect a lot of sound, especially those with bare floors and walls, may sound overly shrill or “bright.” Turning down the treble control (toward –) decreases treble sound.</p> <p>Rooms with a lot of sound-absorbing furnishings, such as upholstered furniture, wall-to-wall carpet, or heavy drapes, may sound muffled or dull. Moving speakers further away from soft furnishings increases treble. You can increase treble sound by slightly turning up the treble control (toward +).</p> <p>Too much or too little bass</p> <p>You can decrease bass sound by turning down the bass control (toward –). To increase bass, turn up the bass control (toward +). Acoustimass module placement also affects the amount of bass you hear. Placing the module closer to the corner of the room increases bass. Moving the module away from the corner decreases bass.</p> <p>[1] at 40:</p>

Between these are SOURCE buttons (FM, AM, CD, VIDEO 1, VIDEO 2, TAPE, AUX) and a KEYPAD with numbers 1-0. The central area is the 'Current status display' showing 'FM STEREO 87.9'. Above it is the 'Source display area' showing 'FM'. Below it are SEEK and PRESET buttons. Labels with leader lines point to the Primary buttons, SOURCE buttons, Current status display, Source display area, and KEYPAD buttons.</p> <p>[1] at 22:</p>

Claim 1 Portion	Claim 1 Text	Bose Lifestyle
		<p><i>Listening to the system</i></p> <p>Your Lifestyle® 50 system uses digital signal processing to bring even greater realism and impact to both movies and music recordings. Built-in Dolby Digital decoding delivers up to 5.1 discrete audio channels (that is, five for the independent Jewel Cube® speakers and one for rich bass from the Acoustimass® module) from DVD, digital TV, next-generation cable boxes, and satellite receivers. With analog formats, as well as for two-channel PCM and Dolby Digital bitstreams, Videostage® decoding steers front information to the left, center, and right, and directs surround information to the left and right rear channels. As a result, the sound of stereo broadcasts and rented or recorded tapes can approach that of your DVD discs.</p> <p>In addition, Videostage decoding can process a one-channel program and direct five-channel sound to five independent speakers. Dialogue remains locked on-screen, while music and ambient effects fill the room to increase your listening enjoyment.</p> <p>You may choose to listen through two, three, or five speakers. Traditional stereo may be enjoyed through two or more speakers. Listening through three or five speakers helps anchor the dialogue of movies to the picture and provides a more solid image for music vocals. For the greatest surround effect, listening through five speakers gives you the most convincing sound experience.</p> <p>[1] at 22:</p> <p><i>Adjusting center and surround levels</i></p> <p>The SPEAKERS selection display (Figure 23) also allows you to adjust the volume levels of the center and surround speakers. At the factory, these levels are set to zero. To adjust them, press the MENU button until SPEAKERS is displayed. Then use the ◀ or ▶ arrow buttons to adjust the levels.</p> <ul style="list-style-type: none"> • The CENTER level can be adjusted to soften or emphasize center speaker image. • The SURROUND level can be adjusted to move the surround information forward in the room or further to the rear. <p>The system remembers the center and surround level settings for the room in which they were adjusted.</p> <p>[1] at 36:</p>

Claim 1 Portion	Claim 1 Text	Bose Lifestyle
		<p>Fine-tuning your system</p> <p>In most situations, you only need to follow the speaker placement guidelines (see “Setting Up” on pages 6-8) for your system to provide excellent sound quality. You do not need to adjust tone settings for changes in volume, since Bose® patented integrated signal processing provides a natural tonal balance over the full range of volume settings.</p> <p>If desired, you can further fine-tune your system as described here.</p> <p>Figure 39 <i>Treble and bass controls</i></p>  <p>Adjusting speaker controls</p> <p>The Lifestyle® 50 system treble and bass controls are located on the Acoustimass® module (Figure 39). They allow you to adjust the treble (high frequencies) and bass (low frequencies). In the normal setting, the dots on each control are in the 12 o'clock position. You can also locate the normal setting by feeling when the control settles into the notch at this position. Turn the controls clockwise to increase, and counterclockwise to decrease, the amount of treble or bass.</p> <p>Compensating for room acoustics</p> <p>The acoustics (sound qualities) of your room can affect the overall sound quality of any speaker system. In general, you can reduce many problems with acoustics by the careful use of the treble and bass controls.</p> <p>Too much or too little treble</p> <p>Rooms that reflect a lot of sound, especially those with bare floors and walls, may sound overly shrill or “bright.” Turning down the treble control (toward –) decreases treble sound. Rooms with a lot of sound-absorbing furnishings, such as upholstered furniture, wall-to-wall carpet, or heavy drapes, may sound muffled or dull. Moving speakers further away from soft furnishings increases treble. You can increase treble sound by slightly turning up the treble control (toward +).</p> <p>Too much or too little bass</p> <p>You can decrease bass sound by turning down the bass control (toward –). To increase bass, turn up the bass control (toward +). Acoustimass module placement also affects the amount of bass you hear. Placing the module closer to the corner of the room increases bass. Moving the module away from the corner decreases bass.</p> <p>[1] at 40:</p>

On the right side, there are four primary buttons: 'VOLUME' (with a downward arrow), 'MUTE', 'VOLUME' (with an upward arrow), and 'TUNE'. Between these are 'SOURCE' buttons: 'FM', 'AM', 'CD', 'VIDEO 1', 'VIDEO 2', 'TAPE', and 'AUX'. A central 'Current status display' shows 'FM', 'STEREO', and '87.9'. Below the display are 'SEEK' and 'PRESET' buttons. To the right of the display is a 'KEYPAD' with buttons 1-0. Labels with leader lines identify: 'Primary buttons' (left and right), 'SOURCE buttons', 'Current status display', 'Source display area' (dashed box around the display), and 'KEYPAD buttons'.</p> <p>[1] at 22:</p>

Claim 1 Portion	Claim 1 Text	Bose Lifestyle
		<p><i>Listening to the system</i></p> <p>Your Lifestyle® 50 system uses digital signal processing to bring even greater realism and impact to both movies and music recordings. Built-in Dolby Digital decoding delivers up to 5.1 discrete audio channels (that is, five for the independent Jewel Cube® speakers and one for rich bass from the Acoustimass® module) from DVD, digital TV, next-generation cable boxes, and satellite receivers. With analog formats, as well as for two-channel PCM and Dolby Digital bitstreams, Videostage® decoding steers front information to the left, center, and right, and directs surround information to the left and right rear channels. As a result, the sound of stereo broadcasts and rented or recorded tapes can approach that of your DVD discs.</p> <p>In addition, Videostage decoding can process a one-channel program and direct five-channel sound to five independent speakers. Dialogue remains locked on-screen, while music and ambient effects fill the room to increase your listening enjoyment.</p> <p>You may choose to listen through two, three, or five speakers. Traditional stereo may be enjoyed through two or more speakers. Listening through three or five speakers helps anchor the dialogue of movies to the picture and provides a more solid image for music vocals. For the greatest surround effect, listening through five speakers gives you the most convincing sound experience.</p> <p>[1] at 22:</p> <p><i>Adjusting center and surround levels</i></p> <p>The SPEAKERS selection display (Figure 23) also allows you to adjust the volume levels of the center and surround speakers. At the factory, these levels are set to zero. To adjust them, press the MENU button until SPEAKERS is displayed. Then use the ◀ or ▶ arrow buttons to adjust the levels.</p> <ul style="list-style-type: none"> • The CENTER level can be adjusted to soften or emphasize center speaker image. • The SURROUND level can be adjusted to move the surround information forward in the room or further to the rear. <p>The system remembers the center and surround level settings for the room in which they were adjusted.</p> <p>[1] at 36:</p>

Claim 1 Portion	Claim 1 Text	Bose Lifestyle
		<p>Fine-tuning your system</p> <p>In most situations, you only need to follow the speaker placement guidelines (see “Setting Up” on pages 6-8) for your system to provide excellent sound quality. You do not need to adjust tone settings for changes in volume, since Bose® patented integrated signal processing provides a natural tonal balance over the full range of volume settings.</p> <p>If desired, you can further fine-tune your system as described here.</p> <p>Figure 39 <i>Treble and bass controls</i></p>  <p>Adjusting speaker controls</p> <p>The Lifestyle® 50 system treble and bass controls are located on the Acoustimass® module (Figure 39). They allow you to adjust the treble (high frequencies) and bass (low frequencies). In the normal setting, the dots on each control are in the 12 o'clock position. You can also locate the normal setting by feeling when the control settles into the notch at this position. Turn the controls clockwise to increase, and counterclockwise to decrease, the amount of treble or bass.</p> <p>Compensating for room acoustics</p> <p>The acoustics (sound qualities) of your room can affect the overall sound quality of any speaker system. In general, you can reduce many problems with acoustics by the careful use of the treble and bass controls.</p> <p>Too much or too little treble</p> <p>Rooms that reflect a lot of sound, especially those with bare floors and walls, may sound overly shrill or “bright.” Turning down the treble control (toward –) decreases treble sound. Rooms with a lot of sound-absorbing furnishings, such as upholstered furniture, wall-to-wall carpet, or heavy drapes, may sound muffled or dull. Moving speakers further away from soft furnishings increases treble. You can increase treble sound by slightly turning up the treble control (toward +).</p> <p>Too much or too little bass</p> <p>You can decrease bass sound by turning down the bass control (toward –). To increase bass, turn up the bass control (toward +). Acoustimass module placement also affects the amount of bass you hear. Placing the module closer to the corner of the room increases bass. Moving the module away from the corner decreases bass.</p> <p>[1] at 40:</p>

Claim 1 Portion	Claim 1 Text	Bose Lifestyle
		<p>Connecting additional rooms</p> <p>Follow the placement guidelines for the Bose® powered speakers that you plan to connect. Then review your plan for how to connect these speakers to the multi-room interface in your primary room. If you have questions or need extension cables to complete the connections, call Bose Customer Service at the numbers listed on the back inside cover of this owner's guide.</p> <p>CAUTION: Make sure all components are unplugged from the power outlet before you begin hooking up additional speakers.</p> <p>Connect the audio input cable from your additional powered speakers to the selected ROOM jack on the back of the multi-room interface.</p> <ol style="list-style-type: none"> 1. Follow the instructions that came with your speakers for connecting the cable to the speakers. <p>Note: Be sure that each connector is inserted completely into each jack.</p> <p>Figure 47 ROOM jacks on the multi-room interface</p>  <p>[1] at 41:</p>

Claim 1 Portion	Claim 1 Text	Bose Lifestyle
		<p data-bbox="724 300 1234 332">Operating in more than one room</p> <p data-bbox="1024 342 1890 500">Your Lifestyle® 50 system can control up to four sets of Bose® powered speakers, allowing your family to enjoy different audio sources (CD, radio, TV, etc.) in up to four rooms. These rooms are referred to as room A, B, C, and D, with room A being the primary room (the one used for a one-room system). If two or more rooms are connected to your system, the Personal™ music center displays ROOM and HOUSE buttons, and room indicators (A, B, C, and/or D). Figure 48 shows an example display for a two-room system.</p> <p data-bbox="724 521 993 602">Figure 48 <i>Example display for a two-room system</i></p> <p data-bbox="1024 521 1791 545">The ROOM button lets you control a single room or two or more rooms that share a source</p> <p data-bbox="1199 557 1734 581">The HOUSE button lets you control all connected rooms as one</p> <p data-bbox="1367 592 1822 634">The room indicators tell you what was selected by the ROOM or HOUSE button</p>  <p data-bbox="1024 917 1493 950">Understanding the room indicators</p> <ul data-bbox="1024 959 1902 1312" style="list-style-type: none"> <li data-bbox="1024 959 1902 1036">A A boxed letter indicates the presently-selected room or rooms. The selected room is affected by any source changes, or any change you make using the VOLUME, MUTE, ON/OFF, or SLEEP buttons. <li data-bbox="1024 1047 1902 1198">B An unboxed letter indicates a room listening to a shared source. A shared source is one that is playing in the controlled room as well as in up to three additional rooms. If you change the radio station, CD track, etc., of the shared source, the change affects all rooms sharing this source. However, you cannot change sources for all affected rooms at the same time. The VOLUME, MUTE, ON/OFF, and SLEEP buttons only affect the boxed room(s). <li data-bbox="1024 1209 1902 1312">□ An empty box appears for each connected room when you press the HOUSE button. When you change the volume in the HOUSE mode, the numerical level appearing on the display does not represent the actual volume level in all connected rooms. It only represents the actual volume in rooms represented by a boxed letter. <p data-bbox="709 1328 821 1360">[1] at 42:</p>

Using the ROOM button

The ROOM button allows you to select any connected room and control any sound source you want to hear in that room. Each time you press the ROOM button you can transfer control from one room to the next in A-B-C-D order. The room indicators on the display tell you what is currently selected. Rooms listening to a shared source can be linked and controlled as one room.

Turning on different sources in more than one room

Let's say you have a two-room system (rooms A and B) and the entire system is off. To turn on a different source in each room:

1. Wake up the Personal™ music center.
2. Press the ROOM button until the room indicator **[A]** is displayed. Press a source button, such as VIDEO 1, to turn on the system and listen to your DVD player in room A. Adjust the volume to the desired level.
3. Press the ROOM button again. The room indicator **[B]** is displayed. Press a different source button, such as CD, to listen to a CD in room B. Again, adjust the volume to the desired level.
4. Press the ROOM button again and notice that the room indicator **[A]** is displayed. You are controlling room A once again and the displays indicates that the VIDEO 1 source is on.

Setting up a shared source

Now, let's say the system is already on and you want to play the FM radio in rooms A and B:

1. Wake up the Personal music center.
2. Press the ROOM button until the room indicator **[A]** is displayed. Press the FM source button and adjust the volume to the desired level for room A.
3. Press the ROOM button again to select room **[B]**. Press the FM source button and adjust the volume to the desired level for room B. Now, the indicators **A [B]** are displayed.
4. Press the ROOM button again. The indicators **[A] [B]** appear on the display indicating that you can control these two rooms together. Any button command given now (SOURCE, VOLUME, MUTE, ON/OFF, SLEEP) is applied to both rooms.

Note: Remember that there are limits to using different sources in different rooms. With one tuner, the system cannot play one radio station in one room and another radio station in another. Similarly, with one CD changer, the system cannot play two different CDs at the same time.

Linking rooms for common control

There are two ways to link rooms in order to control them as one.

- Set up a shared source in two or more rooms and select them together using the ROOM button. See "Setting up a shared source" above.
- Link all connected rooms using the HOUSE button. See "Using the HOUSE button" on page 43.

Returning to single-room control

After you have gained control of multiple rooms using the ROOM button, you can use the ROOM button again to gain control of a single room. Press ROOM until the room you want is displayed (**[A]**, **[B]**, **[C]**, or **[D]**). Control that room as desired.

Claim 1 Portion	Claim 1 Text	Bose Lifestyle
		[1] at 43:

Using the HOUSE button

Using the HOUSE button, you can link all rooms together and control them as one. When you press the HOUSE button, an empty box indicator is displayed for each connected room. Any button pressed after that (any source button, VOLUME, MUTE, or SLEEP) affects every room. When you are done listening you can press OFF to turn off the entire system.

Note: If you do not press any additional buttons after pressing HOUSE, pressing HOUSE again cancels HOUSE mode.

Press the HOUSE button before each command to apply that command to all rooms:

Press ...**To do this ...**

HOUSE then a source

Play the selected source in all connected rooms.

HOUSE then VOLUME ▲▼

Adjust the volume up or down by the same amount in all rooms that are on, or all connected rooms if they are all off. The system remembers the differences among the original room volume settings.

HOUSE then MUTE

Silence all connected rooms that are on, even if any were previously muted individually. To cancel this command, press HOUSE then MUTE again. Any rooms that were muted before this command was given stay silent until individually unmuted. If you unmute an individual room after it was muted by a HOUSE - MUTE command, the other rooms remain silent until each one is unmuted individually. Pressing HOUSE then VOLUME ▲ unmutes all muted rooms.

HOUSE then SLEEP

Set the SLEEP timer for all rooms that are on. The SLEEP time selected applies to all rooms that are on even if they are playing different sources. If the SLEEP timer was already set in one or more rooms, the display shows the longest time already set. You can accept this time or change it for all the rooms. To cancel the HOUSE - SLEEP command, press HOUSE, SLEEP, CLEAR, and then DONE.

HOUSE then OFF

Turn off the entire system.

Note: Instead of setting the whole house to one sleep time, you can set different sleep times for individual rooms by using the ROOM button to select each room and setting SLEEP.

When two or more rooms are linked, adjusting the SLEEP time affects all linked rooms (indicated by boxed letters).
